

# BREAST ENLARGEMENT SURGERY SILICONE GEL IMPLANTS ARE BACK

**LADIES,** after years of rigorous medical studies, silicone gel implants are now approved by the FDA and are back on the market for breast enlargement surgery.

## BRUCE VAN NATTA, MD

- BOARD CERTIFIED BY THE AMERICAN BOARD OF PLASTIC SURGERY
- 20 YEARS EXPERIENCE

“I am currently an investigator on the cohesive gel implant studies and have been an active investigator on all FDA clinical trials leading up to the re-release of silicone gel breast implants. I can tell you they are an absolutely safe and effective long-term option and are the most studied medical devices ever. As a board certified plastic surgeon who utilized these implants for 20 years, I am completely comfortable recommending them to the women in my own family.

I am also utilizing a surgical technique along with an aggressive post-operative recovery routine that enables women to have breast enlargement surgery with no down time and no narcotics. They are back to normal activities within 24 hours of surgery.”

— BRUCE VAN NATTA, MD

**CALL TODAY** for a **private**, in-depth breast enlargement consultation with Dr. Bruce Van Natta.
